

Heroku application: <https://pet-lovers-hazel.herokuapp.com/>
Database: MongoDB atlas
Server: <https://pet-lovers-server.herokuapp.com/>
Github link: <https://github.com/SWDV-665/final-project-qiaoqiao124>

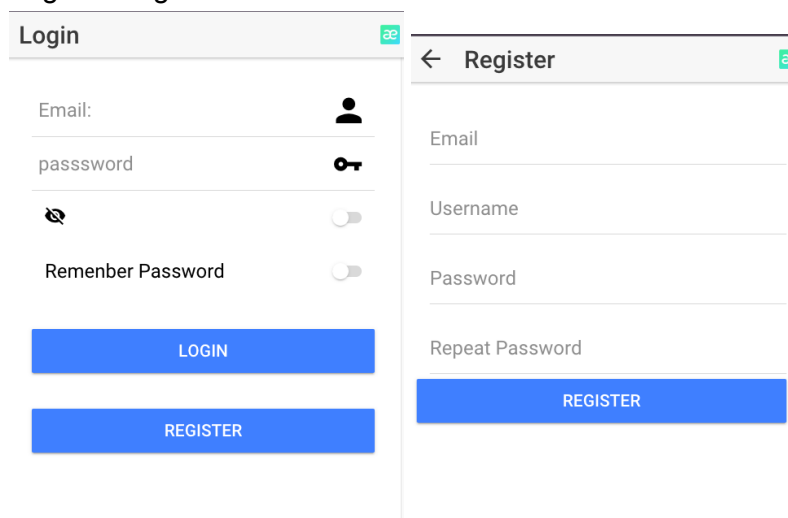

Project envision:

The application is aiming to gather a bunch of people who love pets.

1. They can search for information about different pets, how to raise them and chat with other people.
2. They can also create blogs to share their lives with pets.
3. They can make connections with people who also love pets. They can find someone who also loves pets to help them take care of their pets when they are going out for a vacation.

What users can do with this application for now:

1. Register/ login.

The image displays two mobile application screens side-by-side. The left screen is titled 'Login' and features input fields for 'Email' and 'password', a toggle for 'Remember Password', and two blue buttons labeled 'LOGIN' and 'REGISTER'. The right screen is titled 'Register' and features input fields for 'Email', 'Username', 'Password', and 'Repeat Password', along with a blue 'REGISTER' button. Both screens have a small green icon in the top right corner.

Available accounts:

email: "mary@gmail.com"

username: "mary"

Password: "mary"

email: "mike@gmail.com"

username: "mike"

Password: "mike"

email: "susan@gmail.com"

username: "susan"

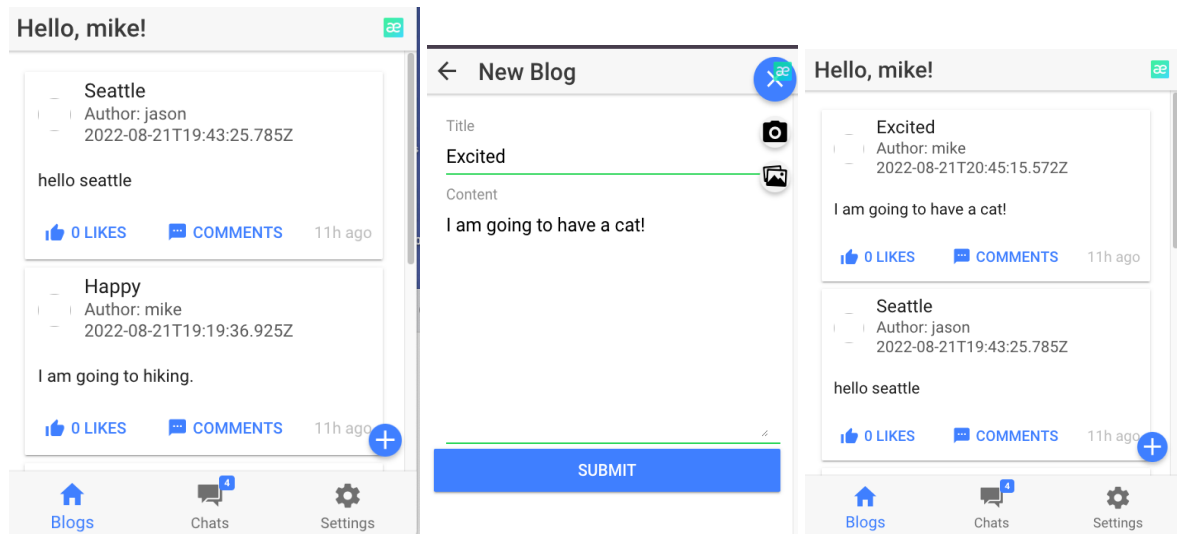

Password: "susan"

You can also register your own account.

Includes: valid email check, password check, space check, empty check, register password consistency check.

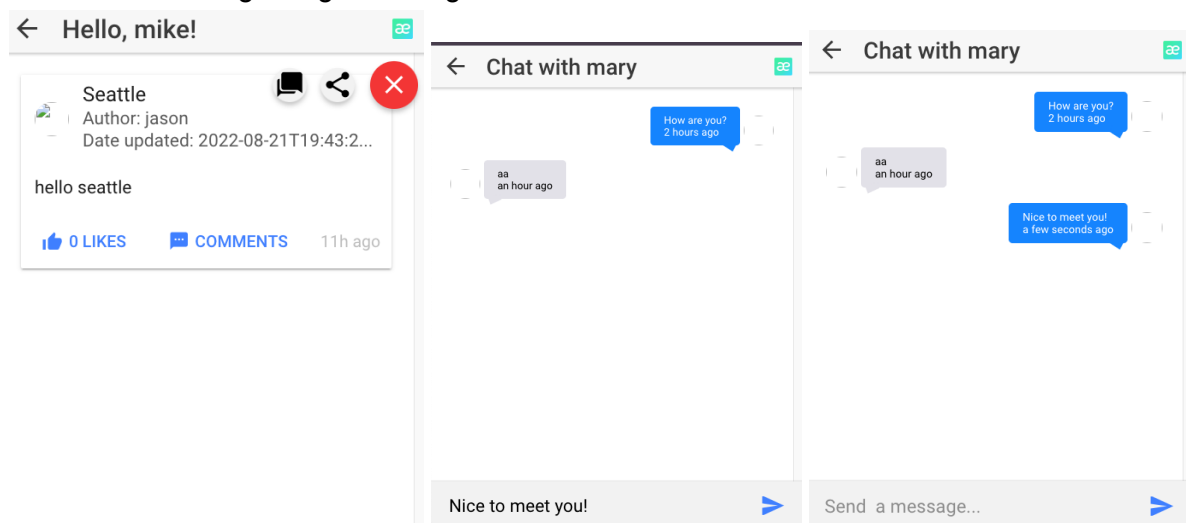

2. Read/ create new blogs.

Camera plugin/ image upload plugin implemented.

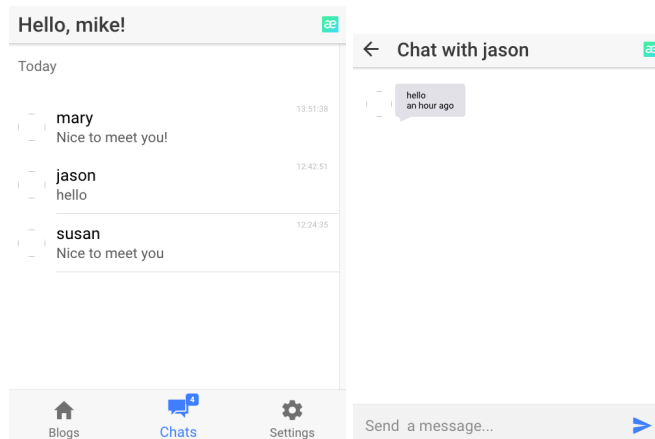

3. Chat with other users/ share the blog after clicking the blog in the blogsPage.

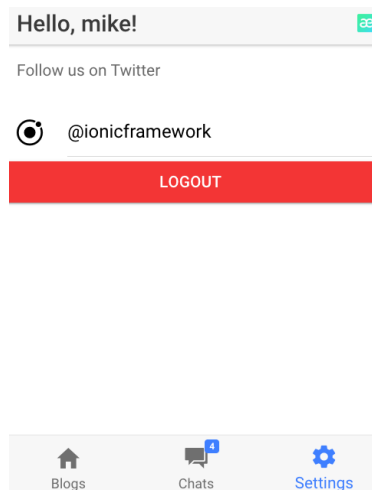

a. Chat through blogDetailPage:

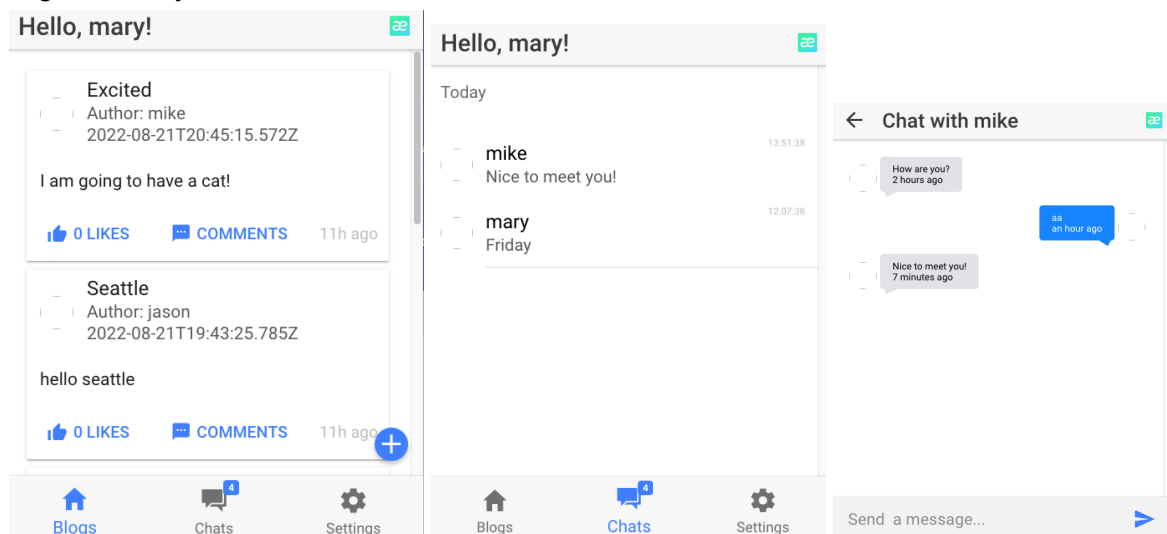

b. Chat through recent chats gallery:

Logout:

Login as Mary:

4. Native Plugins:
 - a. Share the blog by social sharing
 - b. Use the camera to take photos when creating a blog.
 - c. Upload images when creating a blog.

What can be extended in the future:

1. Add a menu at Tabspage level to allow users to search blogs by animal categories or different functions.
2. Allows users to edit blogs and remove blogs.
3. Allows users to follow other users.
4. Notify unread messages to the user.
5. Allow users to search blogs by keyword.
6. Allow users to locate themselves to find breeders near them.
